

These products are already available with the green MDI-free cast resin

Universal box HD
Branch off and connection box with 12 membrane cable glands
Item no. 268173

Y00 HD
Branch off joint also for retrospective installations
Item no. 268135

Y00 V HD
Branch off joint with connectors, also for retrospective installation
Item no. 268136

M11 HD
Connection joint – the classic for connecting all types of cable
Item no. 268137

M11 V HD
Connection joint with connectors - the classic for connecting all types of cable
Item no. 268139

MZ00
Connection joint particularly suitable for the communications sector
Item no. 268174

MRO 2 V
Connection joint with crimping connectors, for horizontal and vertical potting
Item no. 268150

HD 143ml
MDI-free cast resin in a pract. twin compartment mixing bag
Item no. 268309

HD 286ml
MDI-free cast resin in a pract. twin compartment mixing bag
Item no. 268311

Should you have any questions regarding the new products or any special packaging requirements please give us a call or send us an email. We will contact you immediately.

The future is green

D776 268521 11/10

Our new generation cast resin is not only green but also MDI-free

And even exceeds all of the performance characteristics of conventional MDI casting compounds

- ▶ No R40 labelling
- ▶ No concerns regarding carcinogenic effects
- ▶ Self-service not prohibited
- ▶ No sales training required
- ▶ No Xⁿ labelling

The Greek philosopher Heraklit knew back then that “everything is moving” And this still is applicable today, in particular on our global markets.

Just like the chemical substances, the regulations are constantly changing, requiring alignment with the conditions of a market that is also undergoing change. As a result of such legal changes, obligations to amend labelling have been stipulated and these come into effect on the 01.12.2010.

This will have an impact on all MDI cast resin products, in such a way that they can only be sold to private end users by specially trained sales personnel and must be kept locked away in DIY stores in the same way as herbicides and similar products. It is not necessary to stress that the DIY sector will find it very hard to sell under these conditions. However, it was not only due to economic considerations but also with an awareness of our responsibility for people and the environment that we came to develop a new cast resin that is free of Methylene Diphenyl Diisocyanate (MDI).

It is therefore no longer subject to concerns regarding carcinogenic substances as well as the special labelling and sales regulations that apply to this area; instead it can be presented in the normal way on the shelf with the electrical items.

The new green cast resin contains all of the positive characteristics of its black predecessor and is universally suitable for casting all connection joints and the universal box. It permanently seals electrical connections under- and above ground and underwater, protects them against corrosion and attack by small animals.

Cellpack developed the MDI-free cast resin, with foresight, 8 years ago, although it was never produced. At that time there were inquiries from industry but the switch was never made for administrative reasons. However, with the new regulations the European legislation has given us the opportunity, through the new regulations, to play your and our trump card. The future is green and it is called HD.

Cellpack HD cast resin complies with the DIN VDE 0291-T2 standard for heavy current casting compounds and has been tested in accordance with the energy supplier standard (ground joint test, DIN EN50393).
